

The Interoperability Research Conundrum

Have ...

confidentially
agreements

Silos of partners

Short lifetime projects

Want ...

open frameworks

Standards

Consensus

Long-term results

OSLC Embedded System User Group

Aim - To define the tool interoperability needs for the Embedded Systems industry

How?

- Provide an open forum to elicit interoperability scenarios.
- Analyze and consolidate interoperability requirements across projects.
- Define a unified reference set of integration use cases.
- Communicating potential solutions to relevant standardization bodies.

Open community format

- Contribute, with no time nor IP commitments.
 - All interested stakeholders can join and contribute.
 - All information publically available.
 - Interoperability activities survive beyond the lifetime of a single project.
 - Communication across projects can occur.
-

OSLC Embedded System User Group

- current activities

- Elicitation of interoperability requirements
 - Analysis of published results for finished projects such as from iFEST (<http://www.artemis-ifest.eu/>)
 - Active projects are encourage to share use cases and preliminary findings
 - Identification of OSLC integration solutions
-

Rocket science is hard enough...

Shouldn't integration come standard?
